

Shigo

No more fake alerts. Just real money.

Bank-confirmed sales and an income record for Nigerian student sellers.

 Shigo

How it works Why now The record FAQ

Open Shigo

No more fake alerts. Just real money.

Shigo confirms every sale straight from your bank in seconds, and turns your sales into an income record you can take to a lender.

Open Shigo → See it work

Built for Ecobank Blaze accounts. An InnovateX 2026 entry.

The moment

At the counter, the seller checks the buyer's screen, not her own account.

A real alert can take minutes to land. A fake receipt takes seconds to make. Either way, the goods leave with the buyer.

What she sees

A screenshot on the buyer's phone. Anyone can make one.

What she needs

Her own bank saying the money has landed. Nobody can fake that.

The crime

61,000+

people in the Telegram group of Slipcraft, a site that prints fake OPay, Kuda and PalmPay receipts for 650 points each.

Kuda confirmed the receipts impersonate its app. Faking a transfer is now a product.

The damage

Fake alerts are pushing traders back to cash.

52%

had been shown a fake alert

27%

lost money to one

15%

stopped taking transfers

71%

now prefer cash

The seller

Students already run businesses on WhatsApp.

2 in 3

Nigerian students earn while in school

53%

of student businesses sell mainly on WhatsApp

Every sale is a transfer, often from a stranger, and the seller carries the risk.

How it works

One screen the buyer cannot touch.

- 1 Seller makes the order**
Amount, and the buyer's name if known. It shows amber: Not yet.
- 2 Buyer pays as normal**
Transfer from any bank or USSD. No code to type.
- 3 The bank tells Shigo**
The seller's bank confirms the credit. The screen turns green.

Waiting for the bank

After the credit (test payment shown)

Live demo

Watch it turn green.

On stage, a test payment stands in for Ecobank's notification. It is labelled as a test on screen and never counted as income.

Matching

It never guesses with money.

When the bank says money landed	Shigo
One open order at that amount	Turns it green
Two orders at that amount, sender's name fits one	Greens that buyer's order
Sender's name is not the buyer the seller named	Holds it; the seller decides
Two orders still fit	Holds it; the seller picks
No order fits	Keeps it under Unmatched
The same bank message arrives twice	Counts it once

The record

Every green sale becomes income history.

Each row is confirmed by the bank, not typed by the seller.

One tap exports a one-page record for a loan application. Test payments are never counted. The record is the seller's to share; the lender decides.

Date	From	Item	Amount
3 Oct	CHIDI OKAFOR	12-inch frontal	₦18,000
4 Oct	AMAKA EZE	Lace closure	₦25,000
4 Oct	TUNDE BELLO	Wig revamp	₦7,500
Example rows, not real sales			

Why Ecobank

Built on Ecobank's own APIs, for Blaze accounts.

Notification Service

The bank's own credit message is what turns an order green. Adapter built; field names wait on the sandbox payload.

Validate Account Name

Checks the seller's name against their account at sign-in. Client built; runs once credentials are issued.

Blaze

Ecobank's account for young people. Shigo gives student sellers a daily reason to take payments into it.

What works today, and what is waiting.

Live at useshigo.vercel.app

- Account-name check at sign-in, every Nigerian bank
- Sign-in by one-time code
- Matching by amount and buyer name; held money
- Green screen within about 2 seconds of the credit
- Income record export
- Installs on Android and iPhone

Waiting on

- Ecobank sandbox access and the Notification payload (asked 27 Sep)
- SMS sender approval, so codes arrive by text
- Pilot with 10 sellers

Next

Prove it with real sellers.

October

Campus pilot

10 student sellers at FUT0 use Shigo for every order for 7 days.

[__] orders · [__] green · [__] held

After the finale

Android companion

For sellers paid into OPay or Moniepoint: reads the bank app's alert on the seller's own phone, never the buyer's.

After the finale

Pidgin first

The same plain screens in Pidgin, then Hausa, Igbo and Yoruba.

Our ask

Three things from Ecobank.

1

Sandbox, then UAT, access to the Notification Service and Validate Account Name

2

A pilot with Blaze student sellers on one campus

3

A conversation on whether a bank-confirmed sales record can count as income evidence for Blaze customers
